SUMMARY

Senior engineer with 11 years translating ambiguous problems into shipped systems for non-technical stakeholders. At Fooddarzee, designed an ERP with role-specific workflows for Super Admins, Nutritionists, Chefs, and Customers, serving **5,000+ active subscribers** and **4,000+ daily orders**. Now building AI products that meet real businesses where they are.

EXPERIENCE

Senior Backend Developer — Fooddarzee

Remote · Jul 2019 — Jul 2025

Meal-subscription platform · 5,000 active subs · 4,000+ daily orders · Led team of 4 (2 BE + 2 FE)

- Backend owner and technical lead for a meal-subscription platform serving **5,000 active subscribers** and processing **4,000+ meal orders daily**.
- Architected a **multi-role ERP system** (Super Admin, Admin, Nutritionist, Chef, Customer) — each role with bespoke workflows over a shared data layer. Translated stakeholder workflows directly into shipped roles, screens, and audit trails.
- Designed the **subscription engine** with date-level customization (veg days, skips, address changes) and preference-driven order calculations for 4,000+ daily deliveries.
- **Led a team of 4 engineers** (2 backend, 2 frontend); ran code reviews, enforced standards, mentored juniors, coordinated with Product, Ops, and Mobile.
- Integrated **Razorpay** and **Juspay** for one-time and recurring payments processing thousands of transactions monthly; **Zoho** for invoicing via OAuth2; **Firebase Cloud Messaging** + SMS gateways for transactional alerts.
- Automated previously-manual order-processing workflows, **saving the operations team ~10+ hours/week** and reducing operational errors at scale.
- Led migration of the public website to **AWS serverless** (Lambda + CloudFront + S3), **cutting hosting costs ~40%**.

Founder & Solo Developer — Sivon HQ

Remote · Jan 2026 — Present

Live in production, building toward first paying customers

- Founded Sivon HQ and built it from architecture to deployment solo: **29 agents across 7 engines**, two-phase agent architecture, multi-workspace isolation, live SSE streaming of handoffs, and a pluggable multi-destination publisher on GCP.
- Built **multi-workspace isolation** so agencies can run multiple client brands without cross-contamination — all data strictly scoped to `(user_id, workspace_id)` and enforced at every router and Firestore query.
- Engineered an explicit handoff protocol via lightweight director briefings between agents; **live SSE streaming** surfaces tool calls, briefings, and outputs to the UI in real time.
- Built a pluggable multi-destination publisher layer (Ghost, WordPress, Framer, Webflow, Resend, custom webhooks) driven by a Cloud Scheduler calendar that dispatches scheduled content end-to-end.
- Operate production infra and three concurrent projects solo: incident response, billing reconciliation, customer support, deployment automation.

Co-Founder & Technical Lead — Frocery Innovative Retail Pvt. Ltd.

Mumbai · Jan 2018 — May 2019

- Co-founded and tech-led an end-to-end grocery e-commerce platform — backend, mobile apps, payments, and delivery operations.
- Designed a delivery countdown timer that improved on-time delivery SLA adherence.
- Made all technical decisions across backend, mobile, and operations infrastructure as a founding technical lead.

Assistant System Analyst — Gray Matrix Solutions

Mumbai · Feb 2016 — Oct 2017

- Built backend APIs and hybrid mobile applications (Ionic + AngularJS) supporting multiple concurrent client projects.

Technical Trainer & Developer — Suven Consultants & Technology

Mumbai · Dec 2014 — Oct 2015

- Developed PHP web applications; **trained 15–20 interns** in PHP, MySQL, HTML/CSS, and MVC architecture.

SELECTED PROJECTS

Fooddarzee ERP — Multi-role ERP for a meal-subscription business at **5,000 active subs · 4,000+ daily orders**. Backend architecture, subscription engine, payments, AWS serverless migration. *Laravel · PHP · MySQL · AWS · Razorpay · Juspay · Zoho*.

Sivon HQ — Multi-agent AI marketing platform built solo. 29 agents across 7 engines · two-phase architecture · multi-workspace isolation · live SSE handoff streaming · multi-destination publisher. *Next.js 16 · TypeScript · Python · FastAPI · Google Gemini · Firestore · Cloud Run*.

SKILLS

Architecture & Practice: Multi-tenant SaaS architecture, subscription/billing systems, **ERP design**, multi-role workflow modelling, event-driven / async processing, background jobs, webhook design, technical documentation, code review, **mentoring**, remote/async collaboration with non-technical stakeholders

APIs & Integrations: REST (design + consumption), **OAuth2 / OIDC** (Zoho, Google, Trello, Jira), **Payments** (Razorpay, Juspay, Stripe), **Messaging** (Firebase Cloud Messaging, SMS gateways, Trello/Jira webhooks), GraphQL (consumption)

Languages: TypeScript / JavaScript (ES6+, Node.js, 8+ yrs), **PHP** (OOP, MVC, 10+ yrs), **Python** (3+ yrs, AI/agent workloads), **SQL** (MySQL, PostgreSQL — schema design, indexing, query optimization)

Frameworks & Runtime: **Laravel** (advanced, 7+ yrs), **Next.js** (App Router, SSR, API routes, RSC), **FastAPI**, React, Vue.js, Blade, CodeIgniter, Ionic

AI / LLM / Agents: **Google Gemini** (multi-agent orchestration, structured outputs, tool use), **Claude** (tool use, prompt caching, agent design), multi-agent system design, multi-tenant agent platforms, prompt engineering, RAG patterns, AI-assisted development workflows

Cloud & DevOps: **AWS** (Lambda, EC2, S3, CloudFront — serverless migration experience), **Google Cloud** (Cloud Run, Cloud Build, Cloud Scheduler, Firestore, GCS, Firebase Auth — production at Sivon HQ), Vercel, Linux server admin, **GitHub Actions** (CI/CD), Playwright

EDUCATION

Bachelor of Engineering (Computers) — Mumbai University · 2015
